- A. Received
- B. Having received
- C. To be received
- D. Being received

Question 17: The Red List.....to raise people's awareness of conservation needs.

- A. has been introduced B. introduces C. has introduced D. is introducing

Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the questions.

Many people think of global warming and climate change as synonyms, but scientists prefer to use "climate change" when describing the complex shifts now affecting our planet's weather and climate systems. Climate change **encompasses** not only rising average temperatures but also extreme weather events, shifting wildlife populations and habitats, rising seas, and a range of other impacts.

Rising temperatures are affecting wildlife and their habitats. Vanishing ice has challenged species such as the Adélie penguin in Antarctica, where some populations on the western peninsula have collapsed by 90 percent or more.

Precipitation (rain and snowfall) has increased across the globe, on average. Yet some regions are experiencing more severe drought, increasing the risk of wildfires, lost crops, and drinking water shortages.

Hurricanes and other storms are likely to become stronger. Floods and droughts will become more common. Large parts of the U.S., for example, face a higher risk of decades-long "mega droughts" by 2100.

Less freshwater will be available, since glaciers store about three-quarters of the world's freshwater.

Ecosystems will continue to change: Some species will move farther north or become more successful; others, such as polar bears, won't be able to adapt and could become extinct.

A B C D

Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the correct word or phrase that best fits each of the numbered blanks.

Climate scientists from the University of Sydney in Australia say tourism causes over 8 per cent of greenhouse gasses. They also say that this figure will continue to increase because the tourism industry is growing. Their study looked at the carbon footprint of ___ (46) ___ different areas of tourism. It studied the CO2 emissions from transport, events, hotels, restaurants and shopping. It even researched the carbon emissions from producing souvenirs. The researchers spent 18 months ___ (47) ___ the research. They included the tourist activities of 189 countries. Researcher Dr. Arunima Malik said her team analyzed the impact on the environment of over one million businesses ___ (48) ___ in tourism.

The researchers said domestic travel was a bigger cause of CO2 emissions than international or business travel. Air travel ___ (49) ___ was the largest part of tourism's footprint would continue to increase global emissions as more people in the world become richer. The countries causing the most harm were the biggest and richest nations. The USA, China, India and Germany had the largest tourism carbon footprints. Their carbon emissions will continue to increase as more of their citizens' travel. The researchers encouraged holiday-makers and travelers to try and reduce their carbon footprint when on vacation ___ (50) ___ their travel causes less harm to the planet.
